

PLATINUM SERIES

Backed by Stoughton Trailers van business, the Platinum Series grain hopper is able to utilize better volume prices for material, creating a better bottom line for the customer.

Platinum Plus™ 2 Stage Hopper Door

Constructed of corrosion resistant materials, the easy-opening 2-stage door significantly decreases the amount of torque needed by the operator to begin emptying the load.

Platinum Plus™ 2 row Mini LED lights

All Platinum Series hoppers come standard with two rows of 5 mini LED lights. The lights are grommet mounted, easy to replace, and very bright.

Platinum Plus™ Work Area Lights

The patent pending work area lights offer a superior solution when unloading at night. Each hopper and crank are equipped with mini LED lights. The lights are built into the trailer to greatly reduce the chance of being damaged. The work area lights are standard on all Platinum Series grain trailers.

Platinum Series grain hoppers come standard with a 34 degree hopper slope for faster and better cleanouts.

Platinum Plus™ Hot Dipped Galvanized front coupler (Optional)

Stoughton Trailers has introduced a hot dipped galvanized steel option to Platinum Series grain trailers. These trailers come equipped with a galvanized front coupler and landing gear supports to protect against damaging effects of road salts and "de-icing" agents.

Standard on all Platinum Series aluminum subframe grain hoppers are hot dipped galvanized steel supports which connect the subframe to the crossmembers. In combination with the aluminum subframe, this offers a more durable and corrosion resistant solution.
